Summary

First-class engineer and researcher with four co-authored publications, applying machine learning to energy systems analysis and control. Demonstrated technical leadership from design through implementation.
Research Interests: Learning-based control of dynamic systems with formal guarantees.

Work Experience

Guardian by Aman *May 2026 – date*
Co-founder & IoT Engineering Lead *Lagos, Nigeria*

- Developed prototypes (mechanical and PCB design) of body-worn cameras, including ESD compliance verification. Coordinated electronic system verification and thermal and mechanical stress tests.

mevire.org *Aug 2025 – date*
Co-founder & Engineering Lead *Lagos, Nigeria*

- Coordinated delivery of escrow e-invoicing and AI-based bill and contract administration microservices as part of an ERP, using technologies such as Rust crates for up to 10x performance gains.
- Shipped and tested 10+ modules with optimized memory footprint and latency, including a geometric CAD/BIM model viewer and energy simulation available to building services professionals.

Kharis Engineering *Feb 2024 – date*
Project Engineer (Mechanical) & Project Management Officer (Business Development Officer) *Lagos, Nigeria*

- Managed construction activities, including a $10 million award-winning tower, by providing data-driven early identification of risks affecting scheduled milestones using MS Project.
- Built and simulated Revit models to enforce CIBSE, BS and ASHRAE compliance in the safety and reliability of fire-protection and gas-delivery systems, including accurate as-built BIMs for future maintenance.
- Presented bids to a state agency, with a comprehensive execution, logistics, staging and risk-mitigation plan, for EPC contracts, including a portfolio of over ₦20 billion in public school rehabilitation programs.

Center for Research Innovation and Development: TEERG *Mar 2021 – Dec 2023*
Data Scientist & Research Assistant: Energy Systems - 4 publications *Ota, Ogun, Nigeria*

- Implemented predictive software for early-stage diagnosis of lung cancer using VOC biomarker recognition, successfully tested on data from 20+ patients.
- Developed software for asymptotic-dependence wind extreme modelling with Co-Kriging interpolation, resulting in a 30x reduction in analysis lead-time for renewable energy developers.
- Analyzed over 20 TB of environmental data for environmental and energy resource estimation research.

Education

Engineering (Mechanical) *Covenant University*
Bachelor's degree *Jul 2016 – Nov 2021*
Final grade: 4.7/5.0 (First Class Honors)
David Oyedepo Scholar, NASA Hazard Detection Honors, ICPC Regionals Runner-up, Formula Student

Leadership and Service

Hebron MotorSports – 4 years of team mentorship and automotive design, fabrication and tuning.
Mega 3 Technical Team – 7+ years and 1,000+ hours of sound engineering.
Drug Free (NYSC & NDLEA) – Coordinated 40+ hours of high school outreaches and seminar sessions.

Additional Information

NSE (Graduate Member), PMP (in progress), ICWF 1, COREN (in progress), IMechE (Past Student Member)
